Re: SARS public submission invitation

We would like to submit our 25 years experience with Hand-washing education. We hope to be of some help in the fight against SARS in China in general and in Hong Kong in particular.

Proper and frequent water and soap Hand-washing is the most efficient way to prevent infection.

An effective training must take into consideration the fact that people must change their daily habit of Hand-washing. We achieve this by revealing to trainees areas on their hands that have not been thoroughly cleaned.

The use of GlitterBug Potion®, a UV fluorescent lotion, with a view box using UV light has allowed thousands of Health care institutions worldwide to implement fun and efficient infection control training programs with long-lasting effects.

We would be delighted to be associated with the fight against SARS and are ready to send a sample kit of our products for your evaluation.

Respectfully yours,

Philippe Wyffels
